

**City of Long Beach
Long Beach, California**

Capturing the interest of visitors strolling along a harbor boardwalk is a challenge. At Rainbow Harbor, where a historic luxury liner and world-renowned aquarium compete for attention, that challenge is particularly difficult. We addressed it with unique panel architecture, compelling imagery, and vintage images.

The Acorn Group, in collaboration with SoLa Creative, has worked with the City of Long Beach on several projects that help advance the City's stewardship message, including its commitment to restore habitat and create ecological reserves, purchase forest products from certified sustained yield-sources, and honor local sites of historical and cultural significance.

These projects include interpretive panels for DeForest Wetlands (2012), the walk of fame for the Transpacific Yacht Race (2012, 2007) and Long Beach Naval Monument (2007), and interpretive panels for Rainbow Lagoon (2006).

The Acorn Group also created the conceptual design of the gateway to the Los Angeles River Bikeway (2005) and interpretive panels for Golden Shore Wetlands (2002) and the boardwalk at Rainbow Harbor (2001).
